Summary

Target seems to be land w/ some structure present possible. Some aspect of the target is layered, stepped, even terraced. The whole surface is panoramic - wide vista - goes down gradually from high to low, but in stages, stepping down. High

top seems bright, warm, sunny. Down @ lower level seems shady, cool.

Had a strong impression of water, but A02 ~~is~~ front surface a river.

A02 Suggested by target ~~data~~ impressions include, open pit mine, coliseum-like facilities, or Arileba radio telescope.

First-session reflections

Something compelling ~~about~~ about the target - Overall nature and lay-down of the Gestalt seems relevant. It, but feel as "connected" on this as the last one.

Estimate 6.5/10
